

## Product features

- Clearance-free ram locator in the crimping machine (pressure spring integrated in ram head)
- Crimp height adjustment with fixed spindle support and adjustable pairs of wedges
- Front and back feed limitation via adjustable stops
- Optional spring-loaded holding-down clamp with ejector function
- Wear part replacement in ram without disassembly of fitted tool

## Possible variations

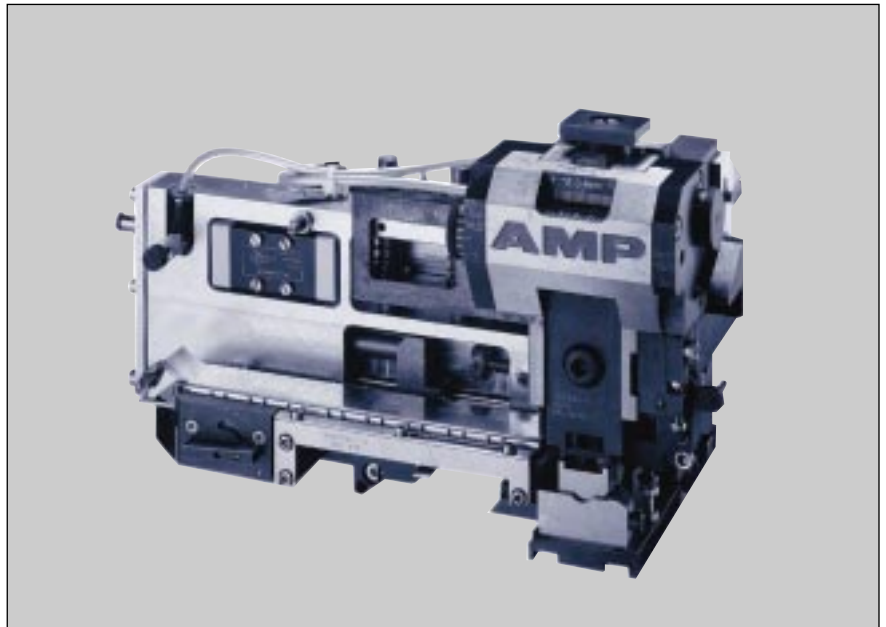

- Slim version with and without strip guide which can be lowered, for the majority of contacts
- Narrow version with or without strip guide which can be lowered, for very long contacts (e.g. ABS contacts, 4 mm diameter, male and female, with/without single wire seal)
- As 1), but crimp height adjustment via wire dial
- As 2), but crimp height adjustment via wire dial
- All versions can be equipped with a piece counter and a spring-loaded holding-down clamp with ejector function. Necessary with critical contacts

## Technical features

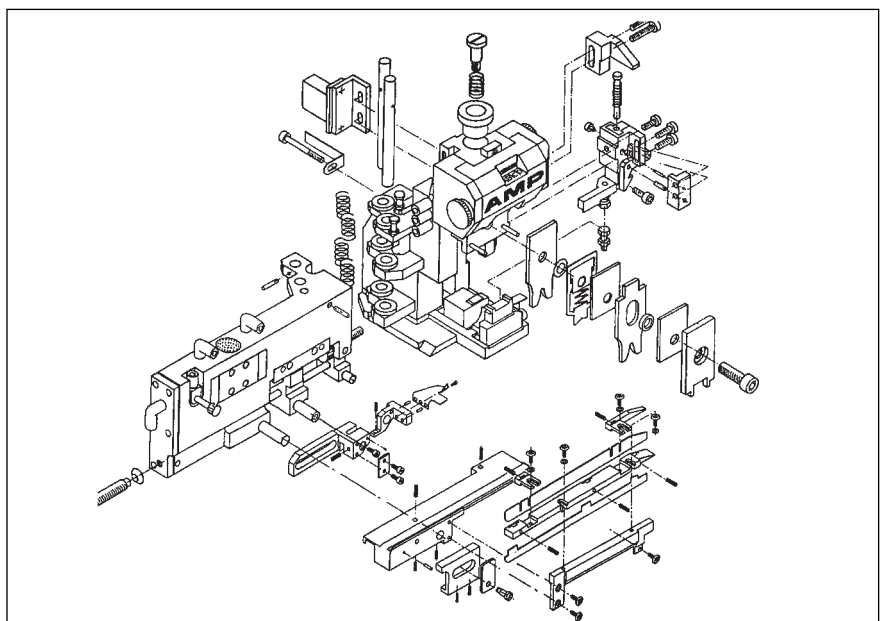

- Weight: approx. 5,5 kg
- Compressed air supply: 600 kPa
- Dimensions: Length = 270 mm  
Width = 145 mm  
Height\* = 1771 mm  
\* Installation Height (TDC)

## AMP products which can be processed

- Side feed crimp contacts

With this miniature quick change tool the pneumatic feed is integrated. Due to the continuously adjustable crimp height adjustment for wire and insulation crimping with contact feed from below and a clearance-free ram locator in the crimping machine, handling and application possibilities have been improved and extended. An improvement of the processing quality has been achieved due to the integration of a strip guide which can be lowered. The tool can be used on all popular AMP crimping machines.

### AMP Worldwide Field Service

Wherever you are in the world -from the very first day that AMP products go into your manufacturing process, AMP is on hand to ensure the smooth installation and running of our application equipment. AMP field service engineers will be on site to set up

machinery, and train the customer's personnel in its use. In the case of fully automated machinery, AMP engineers will perform regular checks to ensure trouble free running. Any problems in production are quickly addressed. This concept increases productivity & output.
